

DRYING OVENS

DRYING OVENS

The CORAL varnish drying ovens consist of an environment created by assembling modular panels in a sandwich manner. The

exterior part of these panels are zinc plated or varnished (optional) and include an air circulation plenum, a CTA model air conditioning unit or a hot air generator, two or more vapour extraction fans, a control panel.

The plant operating procedure is clearly explained in diagram B. The temperature is automatically controlled up to a maximum of 40°C according to the applications.
